

# Varonis Optimization Program

A comprehensive program to improve your data security utilizing the tools you already own.

- Are you concerned about the security of the data in your organization?
- Have you deployed Varonis products but are not sure if you are using their full capabilities?
- When a new server comes on line, do you have a process to make sure it is monitored?
- Have you tagged the most critical folders in your environment?
- Are your business people integrated into your data security program?

Castle Ventures, a long time Varonis partner and pioneer in Data Security and Data Governance, has developed a unique five phase program leveraging our experience. Throughout the years, as we helped our customers secure their sensitive data and maintain compliance, we identified a range of common problems. With the Varonis Optimization Program, we will work with you to implement those best practices, develop an action plan, and move you into a fully functioning data security framework.
